

Chapter 14.38 Landscaping Standards

14.38.010	Purpose.
14.38.020	Applicability.
14.38.030	Unique or special circumstances.
14.38.040	Landscape plan approval.
14.38.050	Landscape plan design criteria – General.
14.38.060	Minimum landscape area requirements.
14.38.070	Parking lot landscaping.
14.38.080	Types of planting.
14.38.090	Landscape area width and type.
14.38.100	Buffer requirements between zones and uses.
14.38.110	Plant materials.
14.38.120	Street trees.
14.38.130	Planting standards.
14.38.140	Grading.
14.38.150	Irrigation.
14.38.160	Performance assurance.
14.38.170	Maintenance requirements.
14.38.180	Maintenance after the bonding period has ended.

14.38.010 Purpose.

A. Landscaping is an important element of overall site or subdivision design. Landscaping shall be designed to complement: the architecture of buildings and other structures, street design and layout, retaining walls, natural features, topography, other site elements. Landscaping shall also be designed to complement and/or enhance the visual appearance of the surrounding area. Landscaping design shall be based on a well-defined concept addressing the function, design, plant types, maintenance, and irrigation of the landscape area.

B. The landscape design shall include a composition of plant materials that create a visual character appropriate to the site and surrounding area, such as stylized, formal, informal, or natural design. The design shall include a suitable combination of trees, shrubs, groundcover plants, vines, lawns and herbaceous material, including native and northwest adapted plants. The number and size of plants shall be determined in a way that addresses color, texture, form, line, proportion, and scale in both the horizontal and vertical plane.

C. Landscaping shall be designed to preserve the aesthetic character of the community, improve the aesthetic quality of the built environment, promote retention and protection of existing vegetation and reduce the impacts of development on storm drainage systems and natural habitats by: providing visual relief from large expanses of parking areas; providing visual relief from long building elevations; providing physical separation between residential and non residential zones; providing visual screen and barriers as a transition between differing land uses; retaining existing vegetation and significant trees by incorporating them into the site design; enhancing the City's appearance and character through the use of street trees; visually unifying the City and its neighborhoods; reducing erosion and storm water runoff; replacing existing vegetation and trees; promoting proper plant selection and continuous maintenance so that plant materials can flourish; adequately screening parking areas, fences, retaining walls and other less attractive features.

D. Implementation of the landscape standards shall also be consistent with the design standards contained in DMC 14.34 Design Guidelines.

E. The landscape standards in this chapter are minimum requirements. The City encourages thoughtful consideration of how additional trees, shrubs, and plants can enhance a property and increase its value and beauty.

F. To provide for long term maintenance after the bonding period.

14.38.020 Applicability.

All new developments, including developments that require approval of a long or short subdivision, site plan, conditional use permit, shoreline substantial development permit, or development agreement, shall be consistent with the landscape standards. Additionally, additions to existing buildings that require site

plan approval and conditional use permits shall comply with the landscape standards to the greatest extent possible as determined by the Director.

14.38.030 Unique or special circumstances.

The Director shall have the authority to vary these standards in unique or special circumstances to assure the fulfillment of the stated purpose of this section, to allow for flexibility and innovation of design, and to provide a superior landscape plan. Special circumstances or unique conditions shall be reviewed with the Director prior to submittal of a landscape plan. Examples of special conditions might include:

- A. Preservation of wildlife habitat;
- B. Preservation of significant natural area and existing vegetation;
- C. Compliance with special easements;
- D. Special site uses;
- E. Relationship with adjacent property;
- F. Preservation of significant trees; and
- G. Preservation of views.

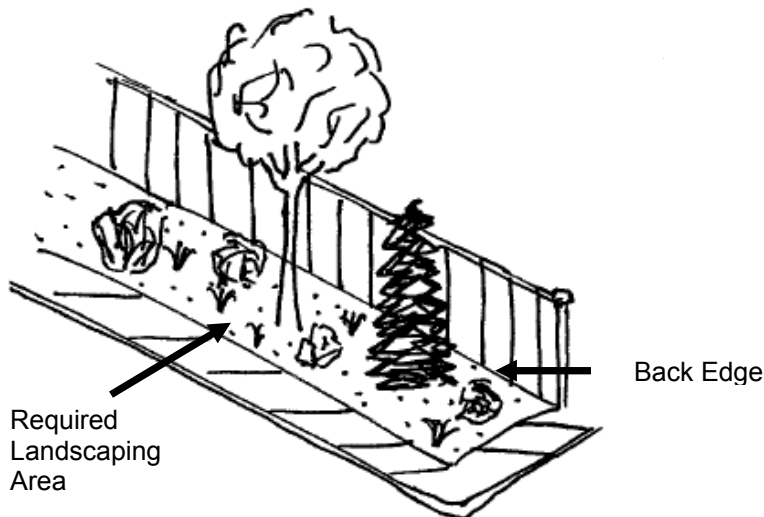

14.38.040 Landscape plan approval.

- A. A development application submittal shall include a preliminary landscape plan in compliance with the guidelines outlined in this chapter. A checklist prepared by the City sets out all required items to be included on a landscape plan. A final landscape plan that is consistent with the preliminary plan, and is consistent with that checklist and with the conditions of approval, shall be submitted and approved prior to a construction drawing approval or building permit issuance.
- B. Landscape plans for subdivisions, site plans, and other projects shall be prepared by a licensed landscape architect and stamped and signed by such professional.
- C. As determined by the Director, the City may use a licensed landscape architect to perform peer review of submitted landscape plans. The costs of such review shall be paid by the developer.

14.38.050 Landscape plan design criteria – General.

- A. Preserve as much existing native vegetation as possible, with preference given to plant groupings. Fill in native vegetation with evergreen trees and shrubs in natural and random patterns where possible.
- B. Provide areas on-site for active and/or passive recreational purposes consistent with open space requirements in DMC 14.64, Additional Development Standards.
- C. Provide separation between incompatible adjacent land uses or activities, and reduce the impact of wind, lighting, and noise and/or the perception of noise.
- D. Design landscaping to accommodate changes in design between adjacent sites, within a site, and from native vegetation areas.
- E. Design foundation plantings to create an effective change from public to private space and from the vertical to horizontal plane at building edges.
- F. Design plantings to soften elevations, reduce the visual impact of less desirable development and/or structures such as large blank walls, retaining walls, dumpster areas, service areas, and large areas of pavement.
- G. Use plantings to highlight significant site features and to define site use areas and circulation corridors without interfering with the use of such areas. Examples include site and building entrances, pedestrian walkways, gathering areas, and plazas.
- H. Design landscaping to use plants and planting techniques that reduce water consumption.
- I. Plants shall be selected and arranged according to the following design criteria:
 - 1. Arrange plants in a composition that creates an overall unified and balanced design.
 - 2. Select a variety of plants providing interest, accent and contrast, using as many native species as possible.
 - 3. Select plants with an awareness of their growth requirements, tolerances, ultimate size, preferences for soil, climate and sun exposure, and negative impacts.
 - 4. Develop a planting design compatible with, and conforming to, the overall project design concept and adjoining properties.
 - 5. Provide plants of adequate size, in an appropriate quantity, and at a spacing, that fulfills the function and design objectives within the stipulated time.

- J. Landscaping shall be installed on private property adjacent to rights-of-way. Where there is right-of-way between the back of sidewalk or curb and the property line, landscaping shall be installed in that area by the adjacent developer in a complementary manner to the on site landscaping. Landscaping in the right-of-way shall not be used as part of minimum landscaping requirements or to meet perimeter landscaping requirements, except that trees planted in the right-of-way can be counted towards meeting tree requirements.
- K. If subdivision fencing is proposed, fences shall be constructed at the back edge of the required landscaping area or easement. Fences are not permitted within any landscaping area, tract, or easement.

Fences shown at back edge of required landscaping area or easement

- L. If private homeowner fences are proposed, fences shall be constructed at the back edge of the required landscaping area tract or easement.
- M. Existing trees and shrubs on a proposed development site may be used to meet requirements where such plant material is:
 1. Consistent with Tree Protection standards, DMC 14.40;
 2. Consistent with the planting design concept;
 3. Likely to survive;
 4. Healthy, has the natural form of the species, and is of a quality equal to or better than available nursery stock.
- N. The minimum size of any planting area shall be 100 square feet except where otherwise indicated, and no less than 5 feet in width or length.
- O. All areas maintained in a pervious manner which exceed the required landscape area must be seeded or otherwise planted to reduce erosion and stormwater runoff. The Director shall determine appropriate landscaping types for such areas based on the location and use of such areas.
- P. Tree circles a minimum of 2 feet in diameter are required when trees are planted in grass areas, except that tree circles are not required in natural area plantings.

14.38.060 Minimum landscape area requirements.

Areas counted toward landscape area requirements include all landscaping located on a project site, with the exception of native growth protection areas, right-of-way landscaping, or the open water portion of a stormwater pond.

- A. Landscaping percentage minimum requirements are as follows:

Zoning District	Minimum Landscape Percentage
R4, R4.5, R6, R8	No specific requirement; areas not impervious to be landscaped; see impervious surface limitations in 14.12
R12	25 percent
MT, CO	25 percent; 20 percent if 50 percent of building is abutting public right-of-way
MU12, MU-I	25 percent; 20 percent if 50 percent of building is abutting public right-of-way
LI	25 percent; 20 percent if 50 percent of building is abutting public right-of-way
PF	25 percent; 20 percent if 50 percent of building is abutting public right-of-way

B. The landscaping percentage is of the gross project site, excluding sensitive areas and buffers.

14.38.070 Parking lot landscaping.

A. General Criteria

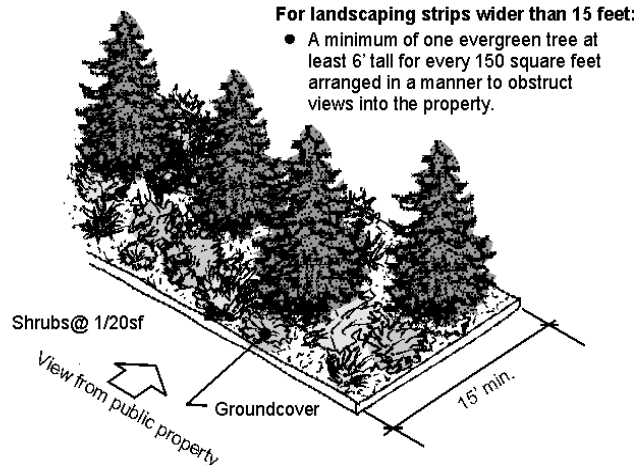

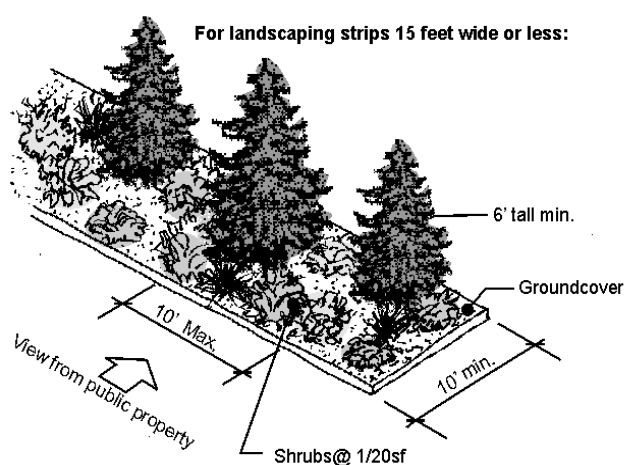

1. All parking lots shall be planted with sufficient trees so that within 10 years, 50 percent of the surface area of the lot is shaded.
2. Parking lot landscaping shall be dispersed throughout the parking lot in islands, buffers, and planter strips.
3. Curbing and step out areas shall not be used in calculating the minimum square footage or width requirements for parking lot landscaping.
4. Parking lots and structures shall be screened with landscaping buffers to the following standards:
 - a. 0 – 100 spaces = 5 feet in width
 - b. Over 100 spaces = 10 feet in width
5. Landscape area per parking stall – 25 square feet minimum.
6. Minimum landscape island size – 100 square feet.
7. Minimum landscape island width – 5 feet.
8. Maximum distance between parking stall and landscaped strip or island – 50 feet.
9. Trees shall be planted in vehicle use landscape areas at a minimum of one tree for each 4 parking stalls. No more than 8 stalls between landscape islands.
10. Parked vehicles may overhang landscaped areas up to 18 inches when wheelstops are provided and only groundcover is located in the that area.
11. Parking stalls adjacent to a landscape area shall have an 18 inch step out area. See illustration below.

14.38.080 Types of planting.

The applicant shall indicate on the preliminary landscape plan the types of planting to be provided in each area of the site, including the specific tree, shrub and ground cover types, locations, and size; and planting specifications. The types of planting shall be consistent with the following definition of planting types:

A. Type I – Solid Screen.

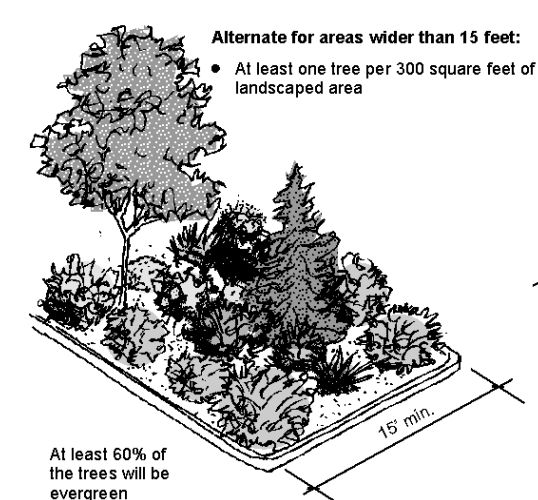

1. Type I planting is intended to provide a solid sight barrier.
2. Type I planting shall consist of evergreen trees a minimum height of 6 feet at planting, and evergreen shrubs which will provide an 80 percent sight-obscuring screen at the time of planting; or a combination of 60 percent evergreen/40 percent deciduous trees and 60 percent evergreen/40 percent deciduous shrubs, backed by 100 percent sight-obscuring decorative wall or fence.
3. The width of the barrier shall be a minimum of 5-20 feet as set out in 14.38.090, unless otherwise specified by the Director.
4. Landscape strips 15 feet or less in width – 1 tree required for every 15-20 linear feet depending on the type of tree proposed.
5. Landscape strips > 15 feet – 1 tree for every 150 square feet.
6. Shrubs – 1 shrub for every 20 square feet.
7. Groundcover on centers to cover the ground within 2 years.

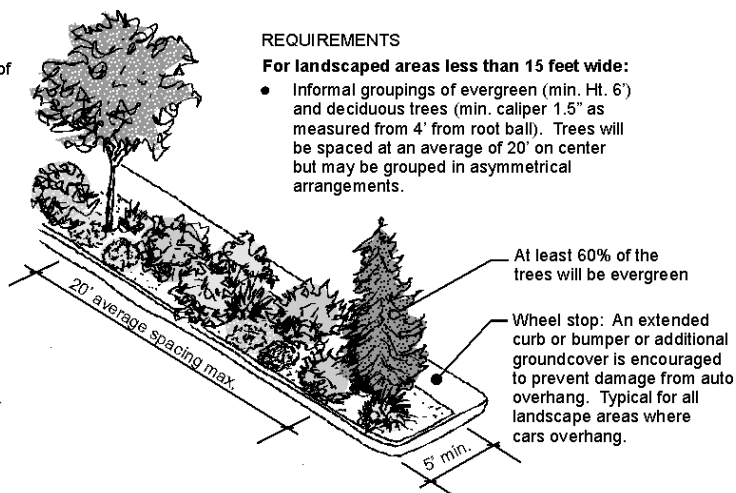

Type I – Solid Screen Examples

B. Type II – Visual Screen.

1. Type II planting is intended to create a visual separation that is not necessarily 100 percent sight-obscuring.
2. Type II planting shall be evergreen or a mixture of evergreen and deciduous trees with large shrubs and groundcover interspersed with the trees, and/or a decorative wall or fence. Type II planting shall include a minimum of 60 percent evergreen trees and evergreen shrubs. The width of the barrier shall generally be at least 5-15 feet, unless otherwise specified by the Director.
3. Landscape strips 15 feet or less in width – Trees required an average of 20-30 feet on center depending on the type of tree proposed.
4. Landscape strips > 15 feet – 1 tree for every 300 square feet.
5. Shrubs – 1 shrub for every 25 square feet.
6. Groundcover on centers to cover the ground within 2 years.

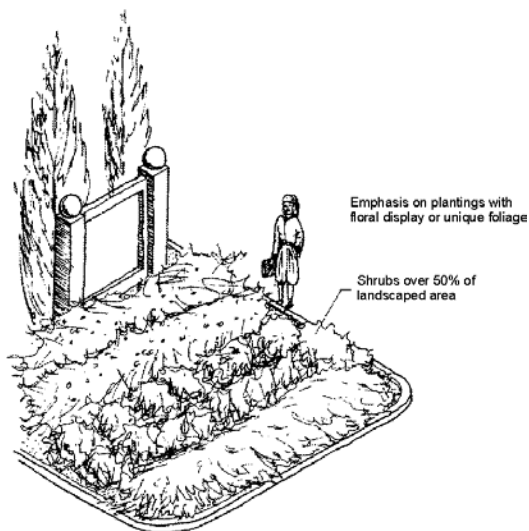

Type II – Visual Screen Examples

C. Type III – Low Cover.

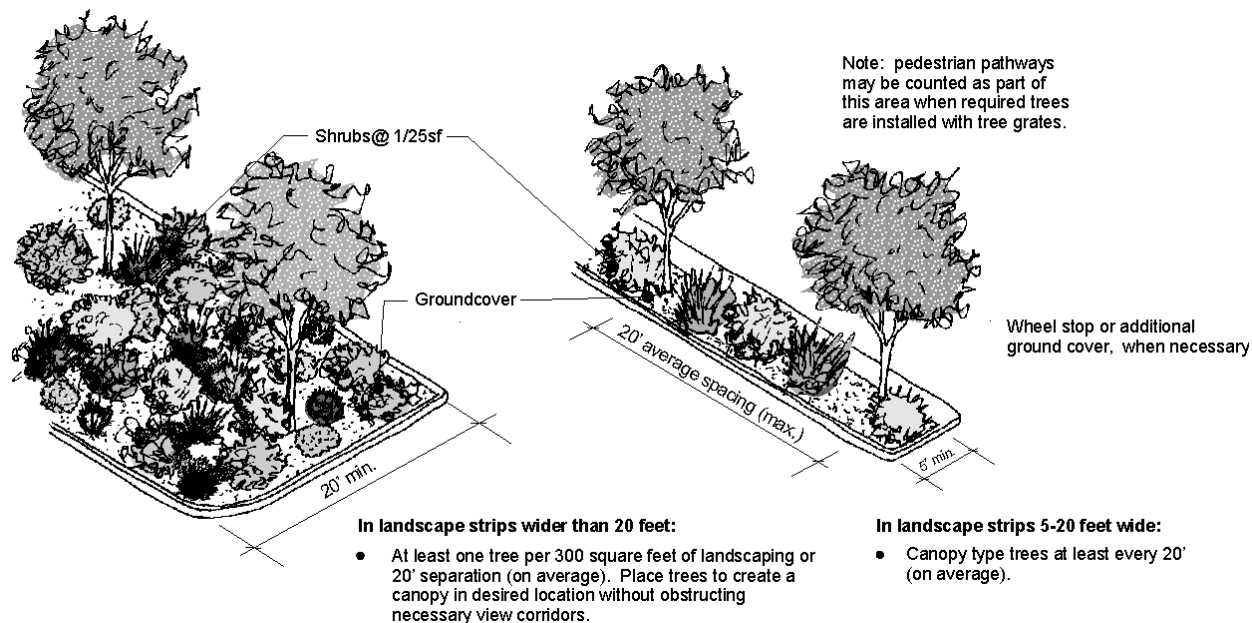

1. Type III planting is intended to provide visual interest, to complement other plant materials, and for erosion control.
2. Type III planting shall consist of a mixture of evergreen and deciduous shrubs, and/or groundcover, and/or perennial or annual flowers to provide a 50 percent covering of the entire planting area at the time of planting.

Type III – Low Cover Example

D. Type IV – Open Area Planting.

1. Type IV planting is intended to provide visual interest and shade in large open areas, particularly parking lots.
2. Type IV planting shall consist of trees planted with supporting shrubs and groundcover. Lawn may be substituted for groundcover where the width of the planting area exceeds 10 feet in the narrowest dimension. Evergreens can be used where sight distance allows. Up to 100 percent of the trees proposed for a parking area may be deciduous.
3. 1 tree required for every 300 square feet.
4. Shrubs – 1 shrub for every 25 square feet.

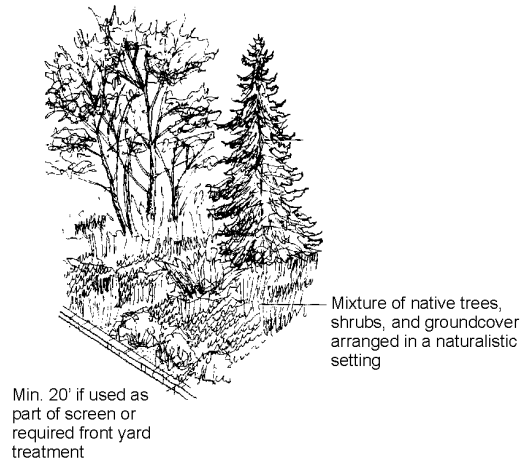

Type IV – Open Area Planting

E. Type V – Wildlife Corridor

1. Type V plantings are intended for wildlife corridors. Type V planting shall consist of trees, shrubs, and ground covers that are native to the Puget Sound and are appropriate to the conditions of the site.

2. Wildlife corridors shall be maintained, enhanced, and replanted where appropriate, based on the type of habitat in the general vicinity.
3. Wildlife corridors of woodland, wetland, and stream habitat shall be maintained or enhanced with native materials that provide habitat and cover for woodland, wetland, and stream wildlife species.
4. Invasive species shall be removed from these areas and replaced with appropriate native plantings.
5. Size and number of plantings shall be determined at the time of plan development depending on site needs and conditions. Plantings shall typically consist of infilling with native deciduous and/or evergreen trees, understory shrubs, and native groundcover.

Type V – Natural Planting Example

14.38.090 Landscape area width and type.

Landscaping shall be installed at the minimum width and of the type as set out in 14.38.090.A.

Table 14.38.090.A – Landscaping Width and Type

Type of Landscaping ⇒	Minimum Width (Greater width may be required by other chapters of this Title)	Type I	Type II	Type III	Type IV	Type V
Type of Use/Location ↓						
Trash/recycle containers	5 feet	X				
Retaining wall landscaping ⁽¹⁾	5 feet		X			
Mechanical/electrical equipment (ground or wall mounted)	5 feet	X				
Utility installations or equipment (ground or wall mounted)	5 feet	X				
Wireless communication facilities	10 feet	X				
Between compatible uses to reduce the visual impact of expanses of pavement and blank building facades	10 feet		X			
Between parking lots and back of curb or sidewalk.	10 feet		X			
Residential development perimeter landscaping adjacent to a road (when structures take access from an interior road) ⁽²⁾	Principal Arterial 15 feet All other roads 10 feet		X			
Parking lot/parking structure perimeter landscaping	5 – 10 feet, see 14.38.070		X			
Where visibility of signs is necessary	Minimum necessary			X		
Easements	Width of easement			X		
Driveway entrances and exits at streets	Minimum necessary for sight distance			X		
Fire access areas, around hydrants and utility boxes	Minimum necessary			X		
Parking lot islands	5 feet minimum				X	
Islands of plantings in lawn areas	64 square feet minimum				X	
Adjacent to property lines where a buffer in accordance with DMC 14.38.100 is not required	10 feet				X	
Supplemental to existing vegetation	NA				X	

Stormwater facilities – minimum 80% evergreen trees and shrubs ⁽³⁾	15 feet					X
Areas adjacent to the Snoqualmie Valley Trail or proposed trails ⁽⁴⁾	10 feet minimum					X
Sensitive areas that are adjacent to structures or right-of-way plantings can count toward mitigation requirements up to a maximum of 50%, as determined appropriate by the Director	10 feet adjacent to a ROW or 15 feet adjacent to a structure or a sensitive area					X
Equipment rental with outside storage	10 feet	X				
Trail network (4)	5 feet			X		

(1) The area between two retaining walls shall have 5 feet of unencumbered landscaping (i.e. drainage rock areas shall not be considered part of the five feet).

(2) Areas shall be placed in a tract. The landscaping tract shall not be considered part of the required building setback

(3) Areas shall be placed in a tract or easement shall be maintained by an association

(4) The trail shall include five feet of trail surface, 5 feet of landscaping on each side, and a 4 foot split rail fence at the edge of the landscaped areas

B. Landscaping requirements for other uses are as determined to be appropriate by the Director.

14.38.100 Buffer requirements between zones and uses.

Table 14.38.100.A sets out minimum buffers from the zoning district listed in the column to the adjacent zoning district listed in the row. The buffer would be on the property of the zoning district listed in the column. Buffers are required when properties in the zoning district column abut a property in a residential zone. Rights-of-ways between properties shall act as a buffer and an additional buffer shall not be required unless determined to be necessary to mitigate for specific impacts in specific circumstances.

Table 14.38.100.A

Zoning District	R4	R4.5	R6	R8	R12	MU12
UT-1 ^{1st}	NA	NA	NA	10 feet ¹	NA	NA
MU12 ²	10 feet ²	10 feet ²	10 feet ²	10 feet ²	10 feet ²	NA
MT	15 feet	15 feet	15 feet	15 feet	15 feet	20 feet/10 feet ³
CO, MU-I	15 feet	15 feet	15 feet	15 feet	15 feet	20 feet/10 feet ³
LI	20 feet	20 feet	20 feet	20 feet	20 feet	20 feet/10 feet ³
PF	20feet	20 feet	20 feet	20 feet	20 feet	20 feet

¹ The 10 foot buffer is required for commercial and/or mixed use developments abutting R-8 residential zones. Attached or detached residential uses do not require such a buffer unless they are above a commercial development.

² The 10 foot buffer is required for multi-family development, including apartments and condominiums. Detached or attached single-family units with individual back yards shall not be required to install the buffer, but shall meet required setbacks.

³ A 20 foot buffer is required for the portion of the property that is solely residential; that buffer can be reduced to 10 feet adjacent to the commercial portion of the property.

- B. A masonry or solid wood fence may also be required between Light Industrial (LI), Public Facility (PF), and Mixed Use-Institutional (MU-I) zones and adjacent residential zoning districts. Such fence shall be at the discretion of the Director and shall be required when the industrial or public facility zone development has potential noise and/or visual impacts on adjacent properties that can be mitigated by a fence.
- C. When a development occurs on a property listed in table 14.38.100.A, and there is a single- or multi-family use on an abutting property and the property is not zoned residential, a 10 foot minimum buffer is required. Such buffer requirement shall be waived if the property on which the single- or multi-family use is located on is under application review for redevelopment.
- D. Buffers as required by Table 14.38.100.A shall be planted with Type I landscaping.
- E. Required buffers shall be provided outside of fences, visible to the adjacent property that requires the buffer protection.

14.38.110 Plant materials.

- A. All plants shall be of the type, size and condition specified in this chapter. They shall exhibit normal habits of growth for the species, shall have buds intact, and shall be free of disease, insects, indications of strawberry root weevil, seed and weed roots, and scars, bruises and breaks.
- B. Plant names shall conform to the latest edition of "Standard Plant Names" as adopted by the American Joint Committee of Horticultural Nomenclature.
- C. All plants shall conform to American Association of Nurserymen (AAN) grades and standards as published in the "American Standard for Nursery Stock" manual.

- D. All plants shall be hardy for the Duvall area.
- E. Plants shall be well suited to the local climate and soil conditions. Selection shall consider soil type and depth, the amount of maintenance required, spacing, exposure to sun and wind, the slope and contours of the site, and compatibility with existing native vegetation preserved on the site. Preservation of existing vegetation is strongly encouraged. The use of xeriscape (low water usage) and plantings approved for low impact development techniques are highly encouraged.
- F. All plants shall be from stock which has been cultivated and acclimatized to conditions similar to those prevailing at the project site.
- G. All plants shall have the following minimum size at installation:
 - 1. Street trees – deciduous only permitted: 2.5-3 inch caliper, measured at breast height.
 - 2. Other deciduous trees – 2 inch caliper, measured at breast height.
 - 3. Evergreen trees: 8-10 foot minimum height range.
 - 4. Vine maples and other multi-stemmed trees: 6-8 foot minimum range.
 - 5. Medium and tall shrubs: minimum 5 gallon size.
 - 6. Groundcover: 4 inches minimum pot size planted 18 inches on center and cover within 2 years.
 - 7. Groundcover: 1 gallon minimum pot size planted a maximum of 3 feet on center, depending on growth habits and cover within 2 years.
- H. Exotic or invasive plants are not permitted. The Director can require any plant type to be exchanged for another based upon peer review of a landscape plan. Groundcover shall be selected for rapid growth and coverage in order to reduce erosion and maintenance.
- I. Mulch.
 - 1. Required plantings, except turf or areas of established ground cover, shall be covered with two inches or more of organic mulch to minimize evaporation and runoff. Mulch shall consist of materials such as yard waste, sawdust, and/or manure that are fully composted. All mulches used in planter beds shall be kept at least six inches away from the trunks of shrubs and trees.
 - 2. Bark, mulch, gravel or other nonvegetative material shall only be used in conjunction with groundcover plantings to assist growth and maintenance or to visually complement plant material. Nonvegetative material is not a substitute for and shall not appear to be dominant over plant material.
- J. Plants shall be spaced appropriately for their type, function and the landscape design (massing, individual display, etc.). For example, plants used for screening may need to be spaced more closely.

14.38.120 Street trees.

- A. Trees listed in the Recommended Street Tree List, as prepared by the City, are required to be installed on all public streets. Exceptions from the Recommended Street Tree List must be submitted by a landscape architect with a brief description of the tree type and proposed spacing and be approved by the Director.
- B. Street trees shall be planted along roadway corridors and street frontages at a minimum of 25 feet on center and a maximum of 40 feet on center, depending on tree type.
- C. Street trees shall be planted according to the guidelines outlined in this chapter.
- D. Removal of street trees without approval of the Director is prohibited and may be subject to enforcement action.
- E. Street tree plantings on arterials shall be consistent in species and variety and of a type designated in the Recommended Street Tree List.
- F. The average spacing for street trees may be adjusted to allow for sight lines, utilities, traffic signs, light standards, driveways and other street appurtenances.
- G. Trees adjacent to public streets that are not planted in a separated landscape strip shall be installed as follows:
 - 1. Deciduous trees shall be planted at least 4 feet from the face of curb to center of tree in tree pits that measure four feet by four feet.
 - 2. Coniferous trees shall be planted at least 10 feet from curbs depending on species.
 - 3. Trees shall have a clear trunk to a height of 6 feet above the ground.

4. Sidewalks with tree grates shall meet DMC 14.34, Design Standards – General.
- H. Residential street trees.
1. Residential street trees shall be located either in a minimum 5 foot landscape strip separated from the sidewalk or adjacent to the sidewalk or back of curb and at least 5 feet from edge of sidewalk or curb.
 2. A minimum of one street tree is required for each lot and shall be on the lot or, if a landscape strip is required, in that landscape strip.
 3. The landscape strip shall be planted with grass, groundcover, or a variety of shrubs, ornamental grass, perennials and groundcover..
 4. A stepping stone, walkway, or other means of traversing the planter strip from the street must be provided at each residence.
 5. The Director may provide for departures where unique site features make it difficult to comply with the standard.

14.38.130 Planting standards.

- A. All planting areas shall be a minimum of 5 feet in width, except where a greater width is required for the health and survival of the plants, or is required by other specific provisions of this chapter.
- B. Plantings shall meet the City requirements for sight clearance at intersections (see DMC 14.64.160), and shall not conflict with pedestrian or traffic safety.
- C. All required planting areas shall extend to the curb line, street edge, or edge of sidewalk.
- D. Permanent curbs or structural barriers/dividers shall enclose planting areas in vehicle use areas.
- E. In parking lots, trees may be planted no closer than 4 feet from pavement edges where vehicles overhang planted areas.
- F. Narrow parking lot islands or peninsulas shall not be planted in sod because of potential problems with maintenance. Location of larger parking spaces adjacent to islands is suggested to reduce damage to plant materials.
- G. A minimum 5 foot wide planting area shall be provided between all building walls and paved areas except at service and pedestrian accesses or as specified in DMC 14.34, Design Guidelines.
- H. Planting areas within existing and proposed water and sewer or pedestrian easements and rights-of-way shall be primarily Type III or Type IV plantings. Trees shall not be planted within 8 feet of a water or sewer pipeline unless approved by the Director. Shrubs shall be at least 4 feet from hydrants.
- I. Topsoil for Grass and Groundcover.
 1. Topsoil shall be natural, sandy, fertile, friable, and possess characteristics of the representative productive soils in the vicinity. It shall not be excessively acid or alkaline nor contain toxic substances which may be harmful to plant growth.
 2. Topsoil shall be without admixture of subsoil. It shall be reasonably free from clay lumps, stones, stumps, debris, roots or similar substances 2 inches or more in diameter, or other objects which might be a hindrance to the plant growth.
 3. Topsoil shall meet the following specifications:

Size:	3/8	No. 20	No. 60	No. 270
Sieve:	ASTM	ASTM	ASTM	ASTM
Percent Passing:	100	77 – 100	0 – 23	0 – 10

4. Grass shall be installed on a minimum of 6 inches of topsoil, 65 – 75 percent compacted. Groundcover shall be installed in a minimum of 4 inches of topsoil, 65 – 75 percent compacted.
 5. In roadway landscape strips, the soil shall be amended by tilling the top 12 inches and blending in 6 inches of 3-way topsoil and then capping that with a minimum of 4 inches of 3-way topsoil.
- J. Soil Specifications to enhance the hydrologic benefits of disturbed soils on sites that have been graded and cleared of vegetation shall include.
1. A minimum organic content of 10 percent by dry weight for all planting beds and other landscaped areas;

2. Organic matter content in turf areas that requires maintenance or supports foot traffic shall be 5 percent;
 3. Organic matter content pH shall be between 5.5 and 7.0;
 4. Planting bed shall be mulched with two to three inches of organic material;
 5. The soil shall be scarified or tilled soil to an 8 inch depth (or to a depth needed to achieve a total depth of 12 inches of uncompacted soil after the amendment is added). Soil within the dripline of existing trees to be retained shall not be tilled or scarified within three feet of the dripline. The soil amendment shall be incorporated no deeper than three to four inches to reduce damage to roots.
- K. Fertilization. All fertilizer applications to turf or trees and shrubs shall follow Washington State University, National Arborist Association or other accepted agronomic or horticultural standards.

14.38.140 Grading.

- A. Existing and proposed contours and retaining walls shall be shown on the preliminary and final landscape plans. All landscape berms or mounds shall also be shown with elevations on the grading plan submitted to the Public Works Department.
- B. Graded slopes in planting areas shall not exceed a 3 horizontal (H): 1 vertical (V) slope in order to decrease erosion potential and to make maintenance easier.
- C. Graded slopes planted with grass shall not exceed a 4(H): 1(V) slope.
- D. On ungraded slopes equal to or greater than 2(H): 1(V), erosion control netting or alternative procedures shall be used to prevent erosion.
- E. Planting areas shall be provided with adequate drainage.

14.38.150 Irrigation.

- A. All plants shall receive sufficient water to assure their survival.
 - B. Irrigation shall be required in all planting areas unless waived by the director.
 - C. Individual residential lots are not required to install irrigation unless the landscape areas are owned in common.
- D. Drainage. All landscapes shall have adequate drainage, either through natural percolation or through an installed drainage system. A percolation rate of one-half inch of water per hour is acceptable.

14.38.160 Performance assurance.

- A. Prior to the issuance of any construction permits for a project, performance security in an amount equal to 150 percent of the landscaping material, irrigation, and installation cost shall be submitted to the City to guarantee installation of the required planting/irrigation. Such costs shall be based on a copy of a contract for such purchase and installation or bid for the required work. Required planting/irrigation shall be installed within 6 months of the date of final construction permit approval or the issuance of a certificate of occupancy, whichever is later. If the requirements are not met in the allotted time, the City may use the security to complete the planting/irrigation.

14.38.170 Maintenance requirements

- A. A maintenance bond, cash deposit, or other security in a form acceptable to the City Attorney covering 10 percent of the cost of the performance assurance bond shall be in place prior to the release of a performance bond and shall be required for 1 year following installation.
- B. Whenever planting has been required to comply with the landscape provisions this chapter, the plant materials shall be permanently maintained in compliance with such regulations, approved plans and approval conditions, in such manner as to accomplish the purpose for which they were required. Failure to maintain required planting which creates substandard landscape shall disqualify such landscape for consideration as a legal nonconforming use.
- C. The Director is authorized to notify the owner of any property upon which landscaping was installed as a condition of approval under this chapter that planting is not being adequately

maintained, and the specific nature of such failure to maintain. The notice shall specify a date by which the property owner shall be expected to comply.

- D. Upon the failure to perform the required maintenance within the date specified by the notice, the Director is authorized to collect funds under the maintenance bond or other security, and cause the required maintenance to be completed.
- E. When funds have not been set aside or the performance assurance has expired, the Director is authorized to request the City Attorney to institute legal action to recover the cost of the required maintenance, and upon receipt of the funds to cause the maintenance to be done.
- F. Maintenance as used in this section includes replacement of dead, diseased or damaged plant materials, removal of weeds and/or invasive species, and repair of irrigation systems.
- G. The property owner is required to maintain all on site landscaping.
- H. In subdivisions or site plans where the right-of-way contains landscaping, the adjacent property owner, homeowner's association or like mechanism, is required to maintain that landscaping. Such requirement shall be noted on the face of the plat or site plan. If there are such requirements that are maintained by an organization other than the adjacent homeowner, or if there are common areas on a property, a homeowner's association is required.
- I. Required landscape buffers are to be maintained by a homeowner's association, management company, or like mechanism as approved by the Director.

14.38.180 Maintenance after the bonding period had ended.

- A. Ongoing maintenance of required landscape areas after a maintenance bond has been released;
 - 1. Non residential required landscaping shall be maintained in a healthy live manner by the property owner.
 - 2. Residential landscaping shall be maintained in a healthy live manner by the homeowner or home owner's association if applicable.
